

Core Java	What is method overriding ? Can we override static , non static, abstract ,final methods
Advanced Java	What is the purpose of @Component annotation

Javascript ----- **DOM manipulation** = CHANGE the DOM structure @ RUN TIME (Request time)

EVENT Handling -----

when user performs an action an EVENT is fired
Programmatically we **catch** that event and DO SOMETHING about it

Event Target = button
ACTION = Click
EVENT = onclick
EVENT HANDLER = f1() // whichever javascript function you call .

HTML CLIENT SIDE VALIDATION

What data are we expecting in the fields -- we want to validate that
Password validation

1	On the html form we are using an even onsubmit = "return true; " then form is submitted onsubmit ="return false; " then form is not submitted
