Core Java	What is the difference between abstract method and final method ?
Advanced Java	What are the different ways to manage Http Sesssion ? What is http session?

Java script is used for
1. DOM Manipulation
2. Event Handling ---- onclick , onsubmit, oninput
3. Html client side validation (programming power = Javascript)

1. Any value that you pick from the input element is a string !!!!
String API in Java script ---- toUpperCase() , charAt, length, concat , trim , slice ,
valueOf ,localeCompare

 2. Array API   in Javascript --------push , pop, length, reverse, slice, splice, sort, filter, map, foreach

slice	splice
the original array is not changed	the original array is changed

SLICE [12, 13, 20] original [12, 13, 20, 24, 10]
SPLICE [24, 10] original: [12, 13, 20]

Read the MDN documentation for Arrays   method **reduce()**
